## Steel Tip & Soft Tip Darts

### Darts

**Steel Tip**

Barrel    Shaft    Flight    Steel Point

**Soft Tip**

Barrel    Shaft    Flight    Soft Tip

CONVERSION DARTS give you the flexibility to play soft or steel tip darts by simply changing the points.

**Steel Tip**  
Weight Range: 18-36 grams  
Popular weight: 21-26 grams

CONVERSION DARTS give you the flexibility to play soft or steel tip darts by simply changing the points.

**Soft Tip**  
Weight Range: 14-18 grams  
Popular weight: 16 grams

### Barrels & Grips

#### Grips

Grips depend on the players individual throwing style. This also applies to the barrel content and weight.

**Grooved:** For those who prefer a smoother finish.

**Knurled:** This style is preferred by players looking for a firmer grip.

**Facet Cut:** Those who want the toughest, coarsest grip.

	Density Rating		
	High	Medium	Low
Tungsten Barrel			
	22gr	22gr	22gr

**Tungsten:** Slimmer and denser than nickel silver and brass which allows for tighter groupings and higher scoring potential.

**Nickel Silver:** Similar to brass, but slightly denser and thinner with a tarnish resistant finish.

**Brass:** Economical and perfect for the beginner player.

### Points

#### Permanent Tempered Steel

STEEL TIP points should not need replacing.

#### Replaceable Nylon Tip

SOFT TIP points will need to be replaced due to normal wear from use.

RETRACTABLE STEEL POINTS are made to retract within the barrels upon contact with a wire on the board. The forward motion of the barrel will thrust the point further into the board. Once the point is retracted the barrel is free to rotate, minimizing deflections.

Retractable Steel Points

### Flights

FLIGHTS may need to be replaced due to wear from normal use.

STANDARD FLIGHTS are primarily used for steel tip darts to accommodate heavier weights.

Standard

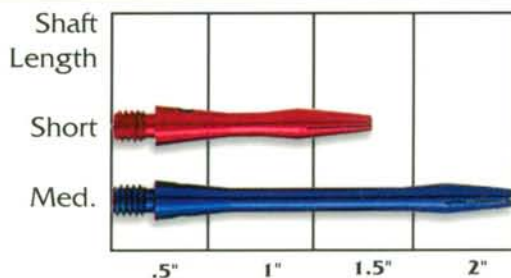

Slim

SLIM FLIGHTS are primarily used for soft tip darts to accommodate lighter weights.

# Shafts

SHAFTS are available in all sizes for both steel tip and soft tip. The length will depend on the player's individual throwing style. Shafts may need to be replaced from normal use.

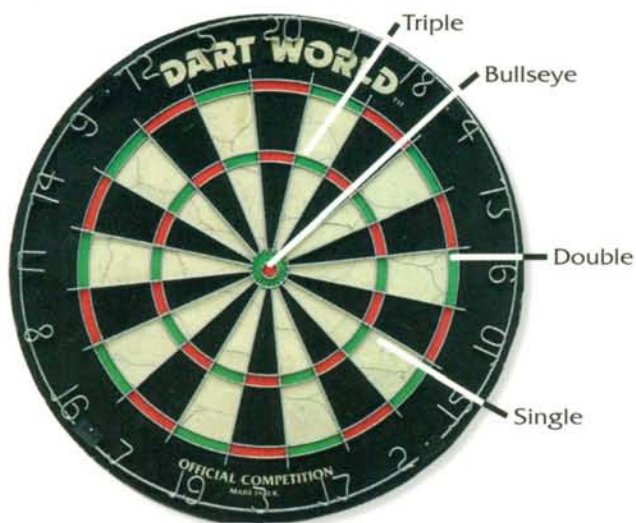

Shaft thread size is determined by the barrel's thread size. 2ba is the most popular size.

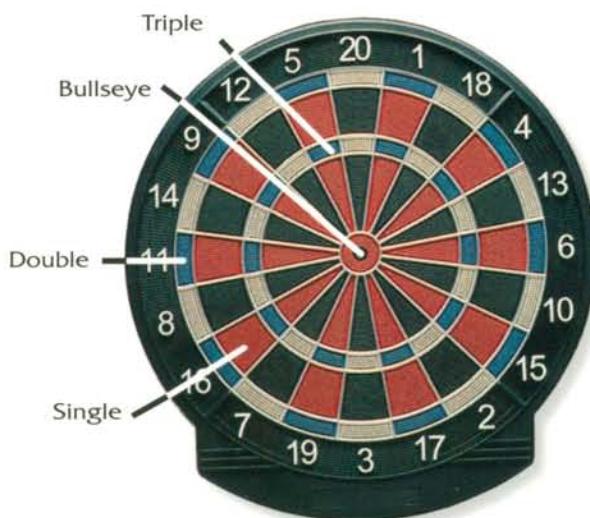

TOP SPIN SHAFTS are aluminum shafts with a spinning top that will rotate the flight for an incoming dart to reduce the deflection and improve scoring.

# Dartboards

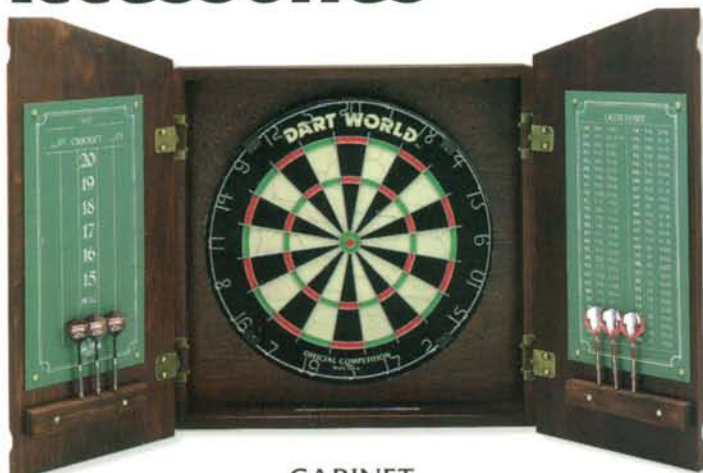

ENGLISH BRISTLE DARTBOARD offers superior quality with stronger wires and more bristle fibers and is used for playing steel tip darts. The lines apparent on the board are normal.

SOFT TIP DART BOARD is available in electronic and non-electronic styles. It is made of plastic and is used for soft tip darts only.

# Accessories

Other accessories include: Cases, Wallets, Outcharts, Scoreboards & Throwlines

**CABINET**  
Designed to hold dartboard and darts. Also to protect walls.

**BACKBOARD**  
Designed to protect walls.
